A NOTE FROM THE DIRECTOR

The summer of 2011 has truly been an exciting season For Le Nichoir! This year, the Centre opened its doors to a great diversity of insectivorous birds as well as many unique species such as a catbird, kingbird, killdeer, bluebird, brown thrasher, vireos, warblers, chickadees, nestling red-breasted mergansers and my all-time favourites....Chimney swifts and a nestling nighthawk!

In addition, we received many swallow species such as Barn, Cliff and Tree swallows, as well as a fledgling Purple martin, which we are proud to announce, all had a 100% release rate!

In recent years Le Nichoir's work has become even more critical in supporting species such as the Barn swallow, who in May of this year, was listed as a threatened species in Quebec. Le Nichoir prides itself in providing professional care to wild birds including other threatened species such as the Bobolink, Least bittern, Chimney swift , Whip-poor-Will and Common nighthawk, as a way of contributing to their long-term survival.

The season started later than usual. Heavy rainfalls in early spring brought forth many nestling and fledgling birds as late as mid-August. Our summer was without a doubt a busy one! With four summer students, an office manager and more than 55 bird care volunteers, everyone was working at their very best. Even after eight years of service with Le Nichoir, I am amazed at how quickly the summer season passes and I always wish that it would last a little bit longer. This year I was spoiled by working alongside a wonderful team of dedicated students and volunteers, both new and returning.

Le Nichoir believes strongly in providing scientific and up-to-date care to all birds. This is accomplished through building up our knowledge and experience by participating in conferences and networking with other professionals in the related field. In November 2011, a volunteer with Le Nichoir along with myself attended a special symposium organized by the International Bird Rescue Council. This conference teaches rehabilitators how to create an emergency plan to respond to wildlife in both natural and man-made disasters. The symposium included a two-day workshop by International Bird Rescue on how to care for individual birds contaminated with oil (fuel, cooking oil, tanglefoot) as well as techniques necessary to respond to a large spill or disaster. If you are interested in supporting Le Nichoir's continuing education, please consider making a donation to our educational fund.

Continued on page 2

continued from page 1

Every year Le Nichoir's family continues to grow. The overwhelming amount of support we receive from our donors and volunteers is the reason why I am here writing this note. I am extremely touched by everyone's eagerness to support Le Nichoir. We would not be able to care for over 1,700 birds this year without you.

Sincere thanks for all your kind help and generosity!

Susan Wylie - Executive Director

NEED A GREAT GIFT IDEA? WANT TO HELP A BIRD?

Join Le Nichoir's Rehabilitation Sponsorship Program.

The cost to rehabilitate and release a bird can easily attain \$45. This includes medical treatment, species appropriate food (live insects, duckling food, fruits and vegetables and fish) and providing enrichment items (perches, pools and mirrors).

You have the option to sponsor the care of a woodpecker, a duckling or a waxwing.

A Rehabilitation Sponsorship Includes:

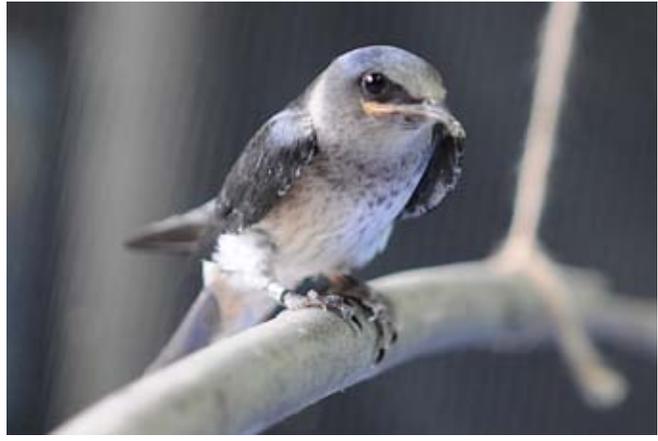

- Certificate of sponsorship that can be given as a gift.
- Invitation to a special tour at Le Nichoir with our staff.
- Report on the rehabilitation of the bird (duckling, cedar waxwing or woodpecker) at Le Nichoir with release dates and picture.
- News from Le Nichoir Newsletter.

See the last page of this newsletter for the application form.

A BIRD STORY

Species: Purple martin (*Progne subis*)

Case: The fledgling bird was found fallen from his condo after a large thunderstorm. The bird was cold, very dehydrated and thin. The bird also had some abdominal bleeding. The parents had abandoned the bird.

Treatment: The fledgling was stabilized by providing it with heat and subcutaneous fluids multiple times a day. The bird was also weighed on a daily basis. It was fed a variety of insects and vitamin supplementation every hour. It was also provided with live house and fruit flies.

Outcome: The bird was banded by McGill Bird Observatory and released three weeks later at the location where it had been found - the Purple martin condos at Valois Park in Dorval, Quebec. Luckily, the bird was released just before the martins migrated south.

Did you know?... Purple martins are the largest members of the swallow family in North America. Purple martins nest mostly in man-made houses that can hold hundreds of birds; they have been doing so for the past 100 years!

A GULL STORY

As many of you already know, Le Nichoir received 221 Ring-billed gulls (often incorrectly referred to as seagulls) and one Herring gull from the SPCA of Montreal this past June. The birds were removed from an industrial building's property in Ville Saint-Laurent, Quebec. The Centre has never admitted this many birds at once, especially of one particular species. Staff and volunteers had to quickly develop a plan to decide how to accommodate such a large influx of birds. Because Ring-billed gulls are protected by Federal law under the Migratory Bird Act, Le Nichoir immediately contacted Environment Canada's enforcement division to ensure that proper protocol was followed.

The gull situation attracted much needed media to the Centre from local newspapers, and the CBC news and radio which helped spread the word that we were in need of immediate help. Once the general public was made aware of our gull situation, we received an overwhelming amount of support. Individuals from all over immediately visited the Centre to drop off donations including bags and boxes of frozen fish. Local merchants and companies generously donated caging and food.

Volunteers Building the New Aviary

Centre received uninterrupted care and attention by the staff and other volunteers.

After four to six weeks of care, the logistics for their release had to be organized. Transporting and releasing such a large group of birds at one time would have been extremely difficult without the help of biologist Jean-Francois Giroux and his team from Université du Québec à Montréal (UQAM), who specialize in Ring-billed gulls. With the appropriate permits from Environment Canada, all the gulls were banded with government bands. When returned, these bands provide information on the birds such as their survival rate and migration

Releasing Gulls at Beauharnois

Aussi disponible en français

In order to accommodate all of the gulls, a new aviary was built. During its construction, birds were temporarily placed inside our duckling aviaries. Amazingly, the Centre had its own "gull crew" of volunteers who came in daily at 8 am to administer care to the gulls. An assembly line of four to six volunteers would clean the cages and replenish their food, while two other volunteers would cut fish (the gulls consumed an astounding 270 kg of fish during their stay) and another two volunteers would be responsible for cleaning the aviaries. The gulls had a full-time operation of their own which was volunteer-based to make sure the other birds at the

Centre received uninterrupted care and attention by the staff and other volunteers.

UQAM Banding Team

patterns. Numbered-colored bands were also put on the birds for observational purposes.

A total of 210 birds were released at the Beauharnois dam on two separate occasions as the birds fledged at different times. The area of release was pre-determined as the site is known for its large colonies of Ring-billed gulls. The Herring gull we received was released with other gulls of the same species in parc des Rapides in Lachine, Quebec.

continued on page 4

continued from page 3

Very few gulls died at Le Nichoir. Many of the birds that succumb were initially admitted with internal bleeding from the large fall off the building. Interestingly, the fledgling gulls at the Centre had a 93% survival rate which is an amazing accomplishment considering that research has shown it can be as low as 63% in the wild.

We have already received feedback from UQAM about multiple gulls being sighted in the Montreal, North and South shore area. One of Le Nichoir's gulls has even migrated all the way to Florida!

This huge endeavor was a success because of all the support we received from donors, volunteers, Environment Canada and UQAM. Something really wonderful did come out of this dire situation. Le Nichoir recruited many new volunteers and established new professional contacts with biologists and government officials and over the long term new contacts will be beneficial to the birds we care for.

Now Foraging in Florida

OUR NEW WEBSITE AND NEWSLETTER POLICY

Due to the generous sponsorship of McAuslan Brewing Le Nichoir recently launched a new website. The website is often the first point of contact people have with Le Nichoir and we have designed it to be informative and easy to use.

For someone finding an injured bird it provides information on first aid and how to reach us but it also provides ideas on ways to contribute to Le Nichoir and the latest news and events. We've integrated all our social media channels and now the easiest way to reach us on twitter, Facebook, YouTube and flickr is by the links on the website.

There are two very important features on the new website; the links to CanadaHelps.org and the newsletter sign up form. In the past we have offered a very basic link to paypal for those wishing to make a donation via the website. This has been replaced by a link to CanadaHelps.org which now processes our online donations in a safe, simple and very cost effective fashion. Donors can choose to make a one-time donation or repeating monthly donations and they can direct their donation to one of several funds e.g. Educational, Loonie Campaign, General or New Centre funds. The donor can even send us a message or special instructions when making their donation so making donations in honour of someone, as a gift or in memory of someone are easily and accurately

accepted. Tax receipts are issued automatically at the time the donation is made.

Because of the costs associated with printing and mailing a traditional newsletter we have rethought the way we communicate with you. If you would like to continue receiving news from Le Nichoir we encourage you to sign up for our new newsletter using the form on the website.

Beginning in the new year we will issue between 4 and 6 short email newsletters during the year and one longer annual report at the end of the year. This new approach will allow us to dramatically reduce our communications costs and will ensure we tell you about projects and events as they happen. (We will have a few paper copies of the annual report available at the Centre and can mail out copies when requested) We do not share our list of email addresses and each email newsletter will have a link that easily allows you to unsubscribe at any time.

If you wish to continue receiving news from Le Nichoir please let us know via the subscription form on the new website.

Your feedback on the new website and newsletter policy are most welcome. Send them to communication@lenichoir.org.

A VOLUNTEER'S STORY

I first came in contact with Le Nichoir at an open house on a nice day in July. I was only 11 years old, too young to volunteer, but I put my name on the list anyway. Because of my enthusiasm and interest I started to volunteer very soon after my first visit. My interest in birds goes back to when I was very little, I used to bring injured birds to Le Nichoir. I began by cleaning cages, sweeping, mopping and cutting up fish. As I became more experienced my duties changed, they included feeding the birds, making the mush for the baby birds, weighing the birds and giving tours at events. Over the 8 years I volunteered at the Centre, I learned a lot about birds, I was even able to identify birds for friends and family. They would often ask me questions about different species of birds and I enjoyed sharing my knowledge with them. I love to tell people about my days at Le Nichoir.

When I volunteered at Le Nichoir I have had the pleasure of seeing many neat types of birds. One time I saw a red tailed hawk that we had to transfer to another rehab centre. I have seen many blue herons, a baby turkey, and this year many many baby sea gulls. I loved nursing baby birds and taking care of the

injured birds, seeing them being released after care at Le Nichoir is one of the most rewarding feelings I have ever had!!!

A wonderful part of my volunteering was working with the staff. They became my friends and are compassionate and caring people who share a common mission, to rehabilitate the birds and eventually release them to their natural habitat.

This description of my experience at Le Nichoir would be incomplete if I did not mention a very special person and that would be Susan Wylie, she is one of the most determined people I know. She is incredible and a true mentor to me. Finally, I would like to mention the expertise, knowledge and inspiration of Lynn Miller.

My years at Le Nichoir will remain an important part of my memories of Hudson. Now that I am living in Ontario I hope to continue my work in some way or another. Thanks and the best of luck to everyone at Le Nichoir!!!

Amanda Jones

NEW CENTRE PROJECT UPDATE

The New Centre project is a major undertaking for Le Nichoir and we are very happy to report that much progress has been made over the last year. Approximately 60% of the funding for the first phase of the building has been secured and we are negotiating an agreement with the Nature Conservancy of Canada and the Town of Hudson which will allow us to construct the New Centre at our present location all the while maintaining the old barn and the existing aviaries.

The original building design has been modified to allow for a phased construction plan which will allow us to move into the new facility earlier than initially predicted.

We have already received a very generous donation of windows and flooring for the new building and offers of donations of materials and labour have begun to arrive.

Aussi disponible en français

If you would like to donate to the New Centre project you may do so by way of the enclosed donation form, through the online donation facility on our website or by calling us at 450 458 2809.

We are in the home stretch and we truly could not undertake this project without you.

A SUMMER EXPERIENCE

I am a McGill student specializing in animal biology. When I began working at Le Nichoir this summer I had no experience in ornithology. Le Nichoir gave me the opportunity to acquire hands on experience with wild birds. I not only acquired knowledge about wild birds but I also developed skills managing the internal tasks at Le Nichoir. I learned about the birds of Quebec as well as their behaviour, anatomy and diseases.

I learned about the different kinds of treatment required for each developing stage of a given species of bird. I also learned about specific types of diets needed for each bird species and the importance of diet on a bird's development and health. To maximize their chance of survival, I had to learn how to diagnose quickly sick or injured birds. Working at Le Nichoir also gave me a chance to witness different stages of bird rehabilitation.

What really inspires me about Le Nichoir is that every bird is treated with the same attentive care. I really enjoyed the fact that at le Nichoir everyone is working towards the same goal; ensure the birds recover quickly and can be released back to the wild. The people I worked with this summer are very experienced and knowledgeable and I felt that together we could really

make a difference to these birds' lives.

My experience this summer confirms my compassion for animals, especially birds and it is more obvious to me why I want to become a veterinarian. Working at Le Nichoir gave me the chance to interact with passionate volunteers and to guide these volunteers to achieve our ultimate goal of saving these birds' lives and returning them to the wild.

Before this summer, I did not know much about animal rehabilitation. With the help of committed employees I really understood the philosophy behind bird rehabilitation and I came to the conclusion that in order to protect wild birds in nature it is crucial to raise awareness about Le Nichoir and its work. I am very grateful that I was given the chance to work at le Nichoir this summer and that I had the opportunity to make a contribution towards the conservation of wild birds.

Geneviève Blanchet - Summer Student 2011

NATURE PHOTOGRAPHER CHRISTOPHER DODDS CAME TO HUDSON

November 30th brought the internationally renowned Canadian Wildlife/Nature Photographer Christopher Dodds to the Hudson Village Theatre as a fundraiser for Le Nichoir. People came from far and wide and Chris entertained the sold out theatre with his stunning images and stories of adventure. A very impressive raffle prize table had everyone emptying their pockets and many of the attendees stayed after the presentation to enjoy the fabulous food of our volunteer caterer Elise Villeneuve.

This event would not have been possible without the generosity of Chris and the Hudson Village Theatre to whom we owe a huge thank you. If you missed the event you can always check out Chris' website at www.ChrisDoddsPhoto.com.

LE NICOIR'S ANNUAL OPEN HOUSE

On Saturday July 16th 2011, Le Nichoir held its annual open house. The public was encouraged to come and visit the birds at the Centre and participate in several organized activities. This year we attracted a new crowd of individuals of all ages and we were excited to have over 250 visitors.

Bird Protection Quebec set up an informative kiosk providing bird-watching tours and answering birding questions. Talented photographer Éléphant Mauve provided stunning photography demonstrations on how to take pictures while birding. Chief Top Leaf surprised us with a taxidermy table and recounted many fascinating stories of Native Americans and wildlife.

Gerard Fuentes demonstrated how to carve birds out of wood while displaying his beautiful bird sculptures and the McGill Bird Observatory introduced individuals to bird banding by banding Le Nichoir birds before releasing them. The Centre's volunteers gave tours of Le Nichoir, while Lynn Miller gave a bird-watching excursion with binoculars and field guides (donated by Mountain Equipment Co-op). There was also face painting, children's crafts and information sessions about Le Nichoir with explanations on how one can contribute to wild bird conservation.

All of the participants complemented each other to make the event fun and educational for the attendees. It was wonderful to see new faces as well as our dedicated annual visitors!

FOR THE BIRDS 2011

Le Nichoir's Co-Founders

Lynn Miller, Denise Paquette and Janette Fauque

This year's "For the Birds" glam benefit dinner and auction was a huge success! This red-carpet event was held at the beautiful Chateau Vaudreuil Pavillion, with live jazz music and photo shoots. Every table was delicately decorated with bird-themed center pieces and delicious chocolates. It was wonderful to see both new and long-time friends of Le Nichoir together sharing this special event with us. Special thanks to Michael Elliott, Mayor of Hudson, QC, Pierre Kary, Mayor of St-Lazare, QC, and MP Meili Faille for attending. About 100 people attended the event, which raised over \$23,000.

Le Nichoir holds fundraisers such as the Benefit Dinner and Auction to raise the funds required to provide care for over 1,400 birds every year. Due to the generosity of attendees, volunteers and donors, the Centre is able to continue its work and fulfill its mission of conserving wild birds as part of our natural heritage for future generations.

YOUR GENEROSITY CREATES CHANGE WHILE EVERY LOONIE COUNTS...

What impact does your annual donation have? Listed below are just a few of the ways your donation helps:

- \$70 allows Le Nichoir to provide professional, scientific care to one Great Blue Heron
- \$100 buys supplies for children to participate in Le Nichoir's "Birds in our Backyard" conservation workshop
- \$500 allows a Le Nichoir team member to attend the International Wildlife Rehabilitation Council's annual training symposium
- \$1,000 purchases much needed building materials to repair and upgrade the songbird aviaries

In other words, the Annual Campaign is Le Nichoir's annual appeal to the community and region to help support the Centre's most pressing needs and promising opportunities. Annual giving has an immediate and meaningful impact in the life of young conservation leaders, wildlife conservation and habitat stewardship. It enables Le Nichoir to provide excellent wild bird care and educational programs, and especially to move forward with confidence, inspiration and strength.

In April 2009, Le Nichoir launched the new Wild Bird Conservation Centre Campaign, one of the most ambitious fundraising initiatives ever undertaken by a wild bird conservation non-profit organization. Annual giving is an essential part of this visionary effort and possible dream. Your generosity will provide the necessary resources to address the growing demand for wildlife conservation and education of our youth.

Please help Le Nichoir conserve wild birds for the benefit of future generations. Donations can be made via the coupon included in this newsletter, online at our website www.lenichoir.org or by telephone at 450 458 2809.

MARNIE CLARKE (1908 - 2011)

Le Nichoir is here because of Marnie Clarke. A dear friend, Joan Robertson, approached Marnie to ask if our fledgling wildlife rehab centre could find a home in her barn. The initial response was tentatively positive, but Marnie wanted to meet and chat. I sat

in the kitchen, toasting my feet on the open oven door and chatting with these wonderful women. That was the beginning of Le Nichoir.

I cared for the birds and Marnie cared for me, feeding me on those long days. These visits were very special for me as I was privileged to get to know Marnie better. She shared so much about the local region and her family's impact on things we take for granted. The land for St James Church and cemetery for instance, came from her family. A family member was the captain of the boat that ran between Montreal and Ottawa. One very special passenger was the new governor general who, on being told that the land and new construction

were to be the captain's home, magnanimously told the captain he could call the cottage after him – Lord Sydenham. Hence Sydenham Cottage, Marnie's home. And then, her travels on a shoe string budget. Marnie played the penny stocks to fund these adventures as her salary as a teacher was shared with her family here on the farm.

Her trips were always amazing, not just because of the time period when she was traveling – Europe, Egypt and a boat up the Nile, the Pacific and her beloved Scotland. Just the fact that she did take off and see the world shows just what a special person she was. Her adventures, her teaching, preparing packages for Britain during the war while living in Three Rivers, the farm and the history of the buildings, I learned so much from Marnie. So many wonderful memories. And such a legacy.

Thank you Marnie.

Lynn Miller
Board member and co-founder Le Nichoir

ARTISTS FLOCK TO THE 2011 WILDCARD PROJECT

Over the last several months 300 artists from near and far have created nearly 700 fabulous Wildcards in support of Le Nichoir. The Wildcards were sold at the 2011 Wildcard Art Market November 19th at Collège Sainte-Anne in Lachine and during a two day after sale event at Galerie Ouest in Sainte-Anne-de-Bellevue.

This was the second edition of the Wildcard. The first edition in 2010 turned out to be our most profitable fundraiser ever with all the proceeds going to the New Centre Project fund. Wildcard sales have contributed over \$65,000 to fund.

A Wildcard sale mixes intrigue and fund raising by concealing the name of the artist of each piece until after the sale. The public could preview all 669 donated works in the Wildcard Collection during two public previews. The first was held October 29th - 30th at the Smith House in parc du Mont-Royal in Montreal and the second on November 5th - 6th at the Canadian Aviation Heritage Centre in Sainte-Anne-de-Bellevue. This was the public's chance to start compiling their shopping lists for the November

19th sale as well as an opportunity for people to drop by and meet Le Nichoir volunteers and to enjoy the collection.

Art lovers were left to guess which pieces came from internationally renowned artists like Royal Canadian Academy of Arts members Gathie Falk and Bill Vazan. Submissions of original paintings, photographs and mixed media came from artists across Canada and as far away as the Bailiwick of Guernsey. To keep everyone guessing, all works in the sale were in a uniform 5 X 7 format, making it more challenging to connect art and artist.

The Wildcards were sold at a very affordable \$65 each, fuelling speculations over possibly snagging a bargain on artwork done by established artists.

Nearly 200 people came out for an evening of great beer, wine, food and extraordinary art and over \$30,000 was added to the New Centre Project fund.

ATTRACTING BIRDS TO YOUR BACKYARD IN WINTER

To help birds survive the cold winter months, here are a few tips to make backyard birding easy:

Clean and wash out your bird house. Keep it up for the birds to use as a shelter in harsh weather. Another option is mounting a roost box which offers perfect shelter as the opening is near the bottom of the box. Coniferous trees and shrubs in your backyard also offer excellent cold protection and a perfect food source when available.

When temperatures fall below freezing, finding water

Aussi disponible en français

is as important to wild birds as finding food. When winter weather makes fresh water scarce, a heated bath will bring plenty of thirsty birds to your yard. You can add a heater to an existing birdbath or choose a bath with a built-in heating element.

What to feed is also important for the birds in winter. Have feeders that contain food with high caloric value such a black-oil sunflower seed, suet, peanut butter and peanuts. These foods are high in protein and fat which help provide warmth during those cold winter nights.

BIRDIE-BANK

You can help Le Nichoir fill up its “Birdie-bank” with lots of Loonies by making a donation of 10 Loonies (\$10) and especially by telling your friends and family about this new campaign.

Join the “Give 10 Loonies” Campaign and help the Centre save more wild birds. The Centre, which is unique in the province, cares for injured or orphaned wild birds and releases them back into their natural habitat.

Your family and friends can help the Centre save more wild birds. Since April, Le Nichoir has received more than 1,700 birds including hundreds of ducklings.

The Centre is preparing for the construction of the new Wild Bird Conservation Centre and more funds are needed. Invite them to join forces with you and help the Centre continue to grow!

Consider spreading the word - help us create a wave. We’ve made it easy! Just go to our new website and look for the CanadaHelps donate button.

THE NEW EDUCATIONAL KIOSK

Le Nichoir’s Kiosk was launched in Spring 2011! Funded by TD Friends of the Environment, the kiosk provides Le Nichoir with the perfect tools to educate the public about wild birds and their natural history, while providing fun and easy bird identification and feeding tips.

After much demand from the public, volunteers are now equipped with a kiosk including interpretive materials such as taxidermy, digital photos, bird calls and a variety of reference books. The kiosk also provides information concerning wild bird/human interactions.

For more information please call Susan at 450 458 2809.
